Ouestion 1 Marked out of 5.00

Flag question

Create a class known as "BankAccount" with methods called deposit() and withdraw().

Create a subclass called SavingsAccount that overrides the withdraw() method to prevent withdrawals if the account balance falls below one hundred.

#### For example:

#### Result

Create a Bank Account object (A/c No. BA1234) with initial balance of \$500: Deposit \$1000 into account BA1234: New balance after depositing \$1000: \$1500.0 Withdraw \$600 from account BA1234: New balance after withdrawing \$600: \$900.0 Create a SavingsAccount object (A/c No. SA1000) with initial balance of \$300: Try to withdraw \$250 from SA1000! Minimum balance of \$100 required! Balance after trying to withdraw \$250: \$300.0

Answer: (penalty regime: 0 %)

#### Reset answer

```
1 - class BankAccount {
        // Private field to store the account number
        private String accountNumber;
 4
 5
        // Private field to store the balance
 6
        private double balance;
 8
        \ensuremath{//} Constructor to initialize account number and balance
 9
        public BankAccount(String accountNumber,double balance){
10
            this.accountNumber=accountNumber;
11
            this.balance=balance;
12
13
14
15
16
17
        // Method to deposit an amount into the account
18
        public void deposit(double amount) {
19
            // Increase the balance by the deposit amount
         balance+=amount;
20
21
22
        // Method to withdraw an amount from the account
23
        public void withdraw(double amount) {
24
             // Check if the balance is sufficient for the withdrawal
25
            if (balance >= amount) {
26
                // Decrease the balance by the withdrawal amount
27
28
                balance -= amount;
29
            } else {
                // Print a message if the balance is insufficient
30
                System.out.println("Insufficient balance");
31
32
33
34
35
        // Method to get the current balance
        public double getBalance() {
36
            // Return the current balance
37
38
            return balance;
39
40
        public String getAccountNumber(){
41
            return accountNumber;
42
43
44
    class SavingsAccount extends BankAccount {
45
        // Constructor to initialize account number and balance
46
        public SavingsAccount(String accountNumber, double balance) {
47
            // Call the parent class constructor
48
            super(accountNumber,balance);
49
50
51
        // Override the withdraw method from the parent class
```

Question **2**Correct
Marked out of 5.00

▼ Flag question

create a class called College with attribute String name, constructor to initialize the name attribute, a method called Admitted(). Create a subclass called CSE that extends Student class, with department attribute, Course() method to sub class. Print the details of the Student.

College

String collegeName;

public College() { }

public admitted() { }

Student:

String studentName;

String department;

public Student(String collegeName, String studentName,String depart) { }

public toString()

**Expected Output:** 

A student admitted in REC CollegeName : REC StudentName : Venkatesh Department : CSE

### For example:

#### Result

A student admitted in REC CollegeName : REC StudentName : Venkatesh Department : CSE

# Answer: (penalty regime: 0 %)

# Reset answer

```
1
    class College
 2
    public String collegeName;
 3
 4
    public College(String collegeName) {
 5
        // initialize the instance variables
 6
        this.collegeName=collegeName;
 8
    public void admitted() {
10
        System.out.println("A student admitted in "+collegeName);
11
12
13
14
    class Student extends College{
15
    String studentName;
16
17
    String department;
18
    public Student(String collegeName, String studentName,String department) {
19
20
       // initialize the instance variables
       super(collegeName);
21
22
       this.studentName=studentName;
23
       this.department=department;
24
25
26
27
    public String toString(){
28
        // return the details of the student
        return "CollegeName : "+collegeName+"\n"+"StudentName : "+studentName+"\n"+"Department :
29
30
31
32
    public class Main {
33
    public static void main (String[] args) {
            Student s1 = new Student("REC","Venkatesh","CSE");
34
35
            s1.admitted();
                                                          // invoke the admitted() method
36
            System.out.println(s1.toString());
37
38
39
                                                                                              Þ
```

Expected	Got	
A student admitted in REC CollegeName : REC StudentName : Venkatesh Department : CSE	A student admitted in REC CollegeName : REC StudentName : Venkatesh Department : CSE

Flag question

Create a class Mobile with constructor and a method basicMobile().

Create a subclass CameraMobile which extends Mobile class, with constructor and a method newFeature().

Create a subclass AndroidMobile which extends CameraMobile, with constructor and a method androidMobile().

display the details of the Android Mobile class by creating the instance. .

```
class Mobile{
```

```
} class CameraMobile extends Mobile {
} class AndroidMobile extends CameraMobile {
} expected output:
```

Basic Mobile is Manufactured Camera Mobile is Manufactured Android Mobile is Manufactured Camera Mobile with 5MG px Touch Screen Mobile is Manufactured

### For example:

#### Result

Basic Mobile is Manufactured Camera Mobile is Manufactured Android Mobile is Manufactured Camera Mobile with 5MG px Touch Screen Mobile is Manufactured

## Answer: (penalty regime: 0 %)

```
1 v class mob{
        mob(){
           System.out.println("Basic Mobile is Manufactured");
        void basmob(){
 5
         System.out.println("Basic Mobile is Manufactured");
 8
 9
    class cam extends mob{
10
        cam(){
11
12
           System.out.println("Camera Mobile is Manufactured");
13
14
        void newm(){
15
            System.out.println("Camera Mobile with 5MG px");
16
17
18
19
    class and extends cam{
20
        and(){
21
        super();
        System.out.println("Android Mobile is Manufactured");
22
23
24
        void andmob(){
           System.out.println("Touch Screen Mobile is Manufactured");
25
26
27
28 v public class Main{
       public static void main(String[]args){
29
           and andmob=new and();
30
           andmob.newm();
31
           andmob.andmob();
32
33
34
35
36
```

```
Expected

Basic Mobile is Manufactured
Camera Mobile is Manufactured
Camera Mobile is Manufactured
Android Mobile is Manufactured
Android Mobile is Manufactured
Android Mobile is Manufactured
```
